

## **DTC- REGD02 Diffractive Optical Element**

• Element Number: DTC- REGD02

• Description: Regular 4,320 dots

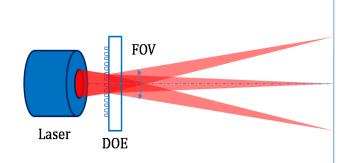

Substrate material: PET/PMMA/GLASS

DOE active area: 6 x 6 mmDesign wavelength: 650 nm

• Minimum recommended beam diameter

(FWHM): 2 mm

## **Pattern Specifications**

A DOE functions with a laser light source that emits a diffractive pattern. Each DOE pattern is characterized by a specific laser wavelength, focal length and transverse mode. Each laser wavelength will result in a different zero order intensity. The focal length is dependent on the DOE and the object distance which can be adjusted using a collimating lens (CL). The transverse mode will affect the dot shape.

Field of View (FOV)	68°x56.6° (HxV)
Aspect Ratio	4:3
Contrast <sup>1</sup> (calculated by gray level)	≧5
Uniformity <sup>2</sup> (calculated by gray level)	≧60%
Zero order	≦0.2%

<sup>&</sup>lt;sup>1</sup> **Contrast**: in the defined area, the ratio of the  $95^{th}$  percentile of the grayscale value over the midian grayscale value of the background,  $C=I_{95\%}/I_{midian}$ 

<sup>&</sup>lt;sup>2</sup> **Uniformity**: the ratio of the grayscale value of the area at a given location to the grayscale value of the area in the center of the pattern,  $U=I_{each\ area}/I_{max\ of\ each\ area}$
